Custom Web Application

URL for webapp: https://665c44a4f499d13bbe237f16--coruscating-creponne-44dcbe.netlify.app/#/login
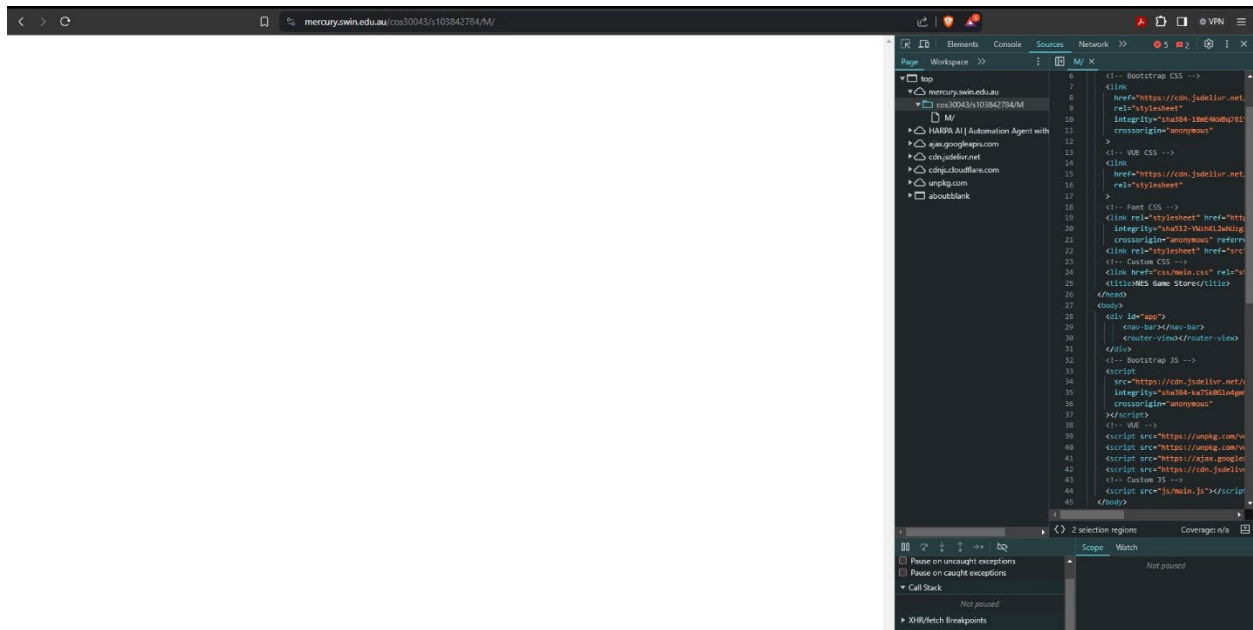

URL for Video demonstration of webapp: https://youtu.be/91_ZaZzFbY4

About the webapp:
This web app is an online game store. This is webapp has Home page displaying games, special features, revies and trailer including socials. Also has a Game page that was built using pagination for displaying available game including their price and add to cart button, which connects to the payment page and take user inputs where it gets save at the backend which can be accessible by the database mysql. This is web app also has Revies page, Videos page and a Separate payment page. Also there is a logout option available.

For the custom webapp hosting I have used Netlify to host my front end due to having issues with my mercury where the webpage was giving me a blank page but the database was working in the in the Swinburne sql. The link for the URl is provided at the top of this report.
Here are some screenshots of mercury not working along side with my email with my professor.

Hi Nur,

Please record that in your video.

Regards,
Grace

Subject: RE: Mercury Hosting Not Working

Hi Grace

I will do that. But with the third-party, I am unable to show the database host. To show the database, I will need to show it from my local host. Is that okay?

Regards
Nur E Siam

Hi Nur,

OK, you can host on third party and provide URL to us. In your video please demo all the pages of your app.

Regards,
Grace

Subject: Mercury Hosting Not Working

Hi Grace,

I am experiencing an error regarding hosting my web app in Mercury. Instead of showing my web app, the screen just shows a blank page. I've attached a screenshot for your reference.

In the demonstration video I have displayed all my pages are working perfectly along side with my database showing the user input.d
